

ALPI Fuel Swap

ALPI Fuel Swap makes it possible to reduce CO₂ emissions from transport – without changing the existing setup

October 2026

How does ALPI Fuel Swap work?

1. *CO₂ reductions lower Scope 3 CO₂ emissions*
2. *You choose the modality and the number of tonnes of CO₂ you wish to reduce*
3. *ALPI allocates certified more sustainable fuels (HVO, SAF or SMF)*
4. *Invoicing is separate and depends on volume and customer needs (quarterly/yearly)*
5. *You receive an order confirmation documenting the purchase of fossil-free fuel*
6. *You receive a certificate for the CO₂ reduction from the fuel supplier, verified by a third party*
7. *The certificate is valid for 2 years*

Road

Fuel Type	HVO100 (Hydrotreated Vegetable Oil)
CO₂ reduction	84–93% CO ₂ e reduction, depending on the raw material
Certification	Verified by a third party and compliant with applicable standards
Method	Mass balance with Book and Claim mechanisms. HVO100 is fuelled directly within ALPI's transport network. The fuel is not necessarily used for the specific shipment
Minimum Purchase	1 tonne CO ₂ e reduction
Price*	Estimated additional cost compared with fossil fuel: approx. +10–15%

* Prices may vary, as fossil fuel prices do

* Reductions using electric trucks can be explored upon request

Fuel Type	Sustainable Maritime Fuel (SMF)
CO ₂ reduction	70–84% CO ₂ e reduction, depending on the raw material and the specific fuel batch
Certification	Verified by a third party and compliant with applicable standards
Method	Book and Claim principle. SMF is used on ships in collaboration with Carboninsets. The fuel is not necessarily used for the specific shipment
Minimum Purchase	5 tonnes CO ₂ e reduction
Price*	Estimated additional cost compared with fossil fuel: approx. +10–15%

* Prices may vary, as fossil fuel prices do

Fuel Type	Sustainable Aviation Fuel (SAF)
CO ₂ reduction	SAF reduces CO ₂ e by approx. 75–80%, depending on the raw material and the specific fuel batch
Certification	Verified by a third party and compliant with applicable standards
Method	Book and Claim principle. SAF is used within Finnair's network and is not necessarily physically linked to the customer's specific shipment
Minimum Purchase	5 tonnes CO ₂ e reduction
Price*	Estimated additional cost compared with fossil fuel: approx. +30–50%

* Prices may vary, as fossil fuel prices do
